Description

Digital personal assistants help people drive cars, plan their day, and buy something online. In a sense, they are simplified versions of artificial intelligence with whom you can talk.

In this project, you will develop, step by step, a simple bot that will help you study programming.

Objective

For the first stage, you will write a bot that displays a greeting, its name, and the year it was created. First impressions count!

Your program should print the following lines:

```
1  Hello! My name is {bot_name}.
2  I was created in {birth_year}.
```

Instead of `{bot_name}`, print any name you choose and replace `{birth_year}` with the current year (four digits). You don't need to take any input at this stage.

Example

Output:

```
1  Hello! My name is Aid.
2  I was created in 2023.
```

Here's the result with your bot named **Aid**, and **2023** as its birth year. Feel free to modify the values, but make sure to print exactly two lines.

⚡ See hint

Write a program   📄 Report a typo

Code Editor   IDE 💎 +100

```
1  print('Hello! My name is Ball.')
2  print('I was created in 2024.')
```

🎉 **Correct**
That's an awesome solution! What do you think about showing it off? <u>Post it to Solutions</u> so other learners can enjoy it too.

It was a tricky task, but you nailed it!

1100 learners liked this problem. **30** didn't like it. **What about you?**

😍 🙂 😐 🙁 😡
